SUMMARY

Full-stack engineer in applied AI/ML (NLP, computer vision): LLM agents, tool calling, RAG, LLM evaluation, fine-tuning, model serving, deep learning, GPU training, quantization, edge inference, IVRs. Shipping end to end since 2017; independent contractor since 2023.

PROFESSIONAL EXPERIENCE

Applied AI Engineer
Mar 2023 – Present

Independent Consulting (Contract) — Los Angeles, CA

- Acting tech lead on Aye Eye Global's edge AI vision product, live with 50+ users in UK retail: Golang daemon on a Rockchip RK3588, multi-cam streams, WebRTC, NPU inference (PyTorch to ONNX to INT8), quantized LLM voice interface, React / TypeScript dashboard.
- Improved AI text detection accuracy from 55% to 71% for Grapple Research by fine-tuning GPT-3.5; built the training-data scrapers, deployed with Docker and Supabase on AWS, and cut costs by 64% with document summarization and caching.
- Built a semantic similarity matching tool for ImmenseX (stealth SaaS) with hybrid vector / graph search RAG (retrieval-augmented generation) on Weaviate and Neo4j, served open-weight LLMs with vLLM on GCP / Linux servers, and cut prompt-writing time by 60%.
- Built Linkby's Python ML pipeline on Databricks / Apache Spark, orchestrated with Airflow: automated feature engineering and supervised model training from Snowflake ad data, running RF, SVM, Naive Bayes and LR in parallel under an A/B testing framework.

Senior Blockchain Engineer
Nov 2021 – Feb 2023

Tilting Point — New York, NY

- Acted as blockchain tech lead: wrote ERC-20 / 721 upgradable proxy smart contracts in Solidity, built containerized REST / gRPC APIs for the marketplace with SSO, shipped an airdrop tool, and rescued $1M+ in MATIC by reverse engineering a Gnosis Safe.
- Architected Go microservices streaming on-chain and off-chain events via Kafka for Unity SDKs in 4+ games; 1000+ TPS analytics.

Software Engineer II
Jun 2020 – Apr 2021

eBay Inc. — New York, NY

- Built low-latency REST APIs in Scala / Spring Boot streaming new ads in real time via Kafka from item-option clicks (under 1s).
- Ran end-to-end MLOps infrastructure (CI/CD with Kubernetes, Jenkins, MLflow) so teams could deploy models to sandboxes exposing data-science-driven statistics; accelerated deep learning model iteration by 50% and built scrapers verifying data integrity.

Machine Learning Engineer
Jan 2018 – May 2020

Independent Consulting (Contract) — New York, NY

- Reached 77% sentiment analysis accuracy with a random forest trained on 10K texts for HereAfterLegacy.ai; built the MVP with scrapers for TV scripts, recreated TV characters as digital personas, and deployed it on Google Cloud Platform.
- Trained neural style transfer models for an Edelman exhibit that applied film-inspired filters to selfies through a REST API.
- Delivered user research, animated Figma wireframes and a working MVP demo for Notebrush.

Cognitive Implementation Engineer
Jun 2017 – Dec 2017

Amelia (formerly IPsoft Inc.) — New York, NY

- Built AI assistant enterprise modules (PII redaction for HIPAA, SOC 2 compliance, Agile practices) for Fortune 500 medical suppliers.

OPEN-SOURCE PROJECTS

Paracosm – Multi-agent simulation engine for structured world modeling, built on AgentOS. github.com/framerslab/paracosm
AgentOS – TypeScript agent runtime (RAG, voice); 680+ stars; 85.6% on LongMemEval-S; powers wilds.ai. github.com/framerslab/agentos
tenets – MCP server that ranks and aggregates code context for coding agents; neural reranking, fully offline. github.com/jddunn/tenets
Restless – Deep learning malware detector (hierarchical attention LSTM); 93% 5-fold accuracy on ClaMP. github.com/jddunn/restless

EDUCATION

Parsons School of Design
2017

Bachelor of Fine Arts in Game Design

AWARDS

5th Place, AT&T National VR and AR Challenge, with THiNKIMMERSIVE team (npe100.com / mobile app), 2017.

SKILLS

Languages: Python, TypeScript, JavaScript, Go, Scala, SQL, Bash
AI / ML: LLM agents, tool calling, MCP, DSPy, RAG, evals, fine-tuning, vLLM, PyTorch, Transformers, scikit-learn, OpenAI, Anthropic
Web: React, Next.js, React Native, Vite, Node.js, Express, FastAPI, GraphQL, Stripe
Data: PostgreSQL (pgvector), DynamoDB, Redis, MongoDB, Elasticsearch, Kafka
Cloud & DevOps: AWS (Lambda, EC2), GCP, Terraform, Docker, Kubernetes, GitHub Actions, CI/CD
