SUMMARY

Applied AI and full-stack engineer: LLM agents and tool use, RAG, evals, fine-tuning, model serving, computer vision and edge inference.

PROFESSIONAL EXPERIENCE

Applied AI Engineer
Mar 2023 – Present

Independent Consulting (Contract) — Los Angeles, CA

- Acting tech lead on Aye Eye Global's edge AI vision product: Go daemon on a Rockchip RK3588, multi-cam streams, WebRTC, NPU inference (PyTorch to ONNX to INT8), quantized LLM voice interface, React / TypeScript dashboard; live with 50+ users in UK retail.
- Improved AI text detection accuracy from 55% to 71% for Grapple Research by fine-tuning OpenAI's GPT-3.5; built the training-data scrapers, deployed the model with Docker and Supabase on AWS, and cut costs by 64% with document summarization and caching.
- Built semantic similarity matching for ImmenseX on Weaviate / Neo4j hybrid RAG with vLLM on GCP; cut prompt-writing time by 60%.
- Built Linkby's Python ML pipeline on Databricks / Apache Spark, orchestrated with Apache Airflow: automated feature engineering and model training from Snowflake ad data, running RF, SVM, Naive Bayes and LR models in parallel under an A/B testing framework.

Senior Blockchain Engineer
Nov 2021 – Feb 2023

Tilting Point — New York, NY

- Acted as blockchain tech lead: wrote ERC-20 / 721 upgradable proxy smart contracts in Solidity, built containerized REST / gRPC APIs for the marketplace with SSO, shipped an airdrop tool, and rescued $1M+ in MATIC by reverse engineering a Gnosis Safe.
- Architected Go microservices streaming on-chain and off-chain events via Kafka for Unity SDKs in 4+ games; 1000+ TPS analytics.

Software Engineer 2
Jun 2020 – Apr 2021

eBay Inc. — New York, NY

- Built REST APIs in Scala / Spring Boot streaming new ads in real time via Kafka from selected item-option clicks (under 1s latency).
- Ran end-to-end MLOps infrastructure (CI/CD with Kubernetes, Jenkins, MLflow) so teams could deploy models to sandboxes exposing data-science-driven statistics; accelerated deep learning model iteration by 50% and built scrapers verifying data integrity.

Machine Learning Engineer
Jan 2018 – May 2020

Independent Consulting (Contract) — New York, NY

- Reached 77% sentiment analysis accuracy with a random forest trained on 10K texts for HereAfterLegacy.ai; built the MVP with scrapers for TV scripts, recreated TV characters as digital personas, and deployed it on Google Cloud Platform.
- Trained neural style transfer models for an Edelman exhibit that applied film-inspired filters to selfies through a REST API.
- Delivered user research, animated Figma wireframes and a working MVP demo for Notebrush.

Cognitive Implementation Engineer
Jun 2017 – Dec 2017

Amelia (formerly IPsoft Inc.) — New York, NY

- Built AI assistant enterprise modules (PII redaction for HIPAA, SOC 2 compliance, Agile practices) for Fortune 500 medical suppliers.

OPEN-SOURCE PROJECTS (1,000+ GITHUB STARS ACROSS ALL REPOS)

AgentOS – TypeScript agent runtime; 680+ stars; 85.6% on LongMemEval-S; powers wilds.ai (900+ users). **github.com/framerslab/agentos**
tenets – MCP server for coding agents that aggregates prompt context with neural ranking, fully offline. **github.com/jddunn/tenets**
full-stack-eval-harness – LLM eval harness for prompts, RAG and model performance. **github.com/jddunn/full-stack-eval-harness**
Paracosm – AI agent swarm simulation engine as a structured world model, built on AgentOS. github.com/framerslab/paracosm
Restless – Hierarchical attention network for anti-malware detection; 93% accuracy on the ClaMP dataset. github.com/jddunn/restless

EDUCATION

Bachelor of Fine Arts in Game Design — Parsons School of Design, 2017

SKILLS

Languages & Web: Python, TypeScript, JavaScript, Go, Scala, SQL, React, Next.js, React Native, Vite, Node.js, Express, FastAPI, GraphQL
AI / ML: LLM agents and tool use (MCP, DSPy), RAG, evals, fine-tuning, vLLM, PyTorch, Transformers, scikit-learn, OpenAI, Anthropic
Data & Cloud: PostgreSQL (pgvector), DynamoDB, Redis, MongoDB, AWS (Bedrock, Lambda, EC2), GCP, Terraform, Docker, Kubernetes
